# AUTOMATIC FLUSH

A greater hygiene and comfort with the contactless flush solutions

THE BRAND NEW RANGE OF AUTOMATIC FLUSH SYSTEMS BRINGS A GREATER HYGIENE AND COMFORT FOR THE USER.

The contactless system is ideal for public places as the user does not have to touch the flush plate. It, therefore, prevents bacteria and germs transmission.

## THE +

- Hygiene
- Flushing efficiency
- Water savings
- Design

Users will become dependent on this system as it will flush for them once they will have left out of the room. This makes sure that followers will meet with a rinsed WC pan.

Flush volumes are set to deliver a small, or a large flush depending on sensor detection time. A step ahead in water savings from the usual single flush automatic flush systems known up to now.

At the same time, a smart and sharp design is offered. This design is duplicated for the ABS and glass versions so that a range community is existing.

The black glass version featuring its mirror strip allows further deepness and transparency sensations. This is a touch of elegance adapted with classy atmospheres.

Finally, light proposes a more modern atmosphere to the LEDs equipped version. The user can choose in between 7 colours in order to match the room decoration.
